rose plastic participates in IMTS 2004

rose plastic to exhibit at IMTS 2004

September 8-15,
McCormick Place,
Chicago (IL USA)

The IMTS, the largest industrial exhibition in the Americas, takes place this year at Lakeside Center, North and South Buildings of McCormick Place in Chicago. The show will occupy more than 1.1 million square feet of floor space, an area nearly equal to 21 NFL football fields! rose plastic will display their complete range of over 2500 different sizes and styles of packaging products. In addition to quality packaging, rose plastic provides guidance on the implementation of reusable packaging systems; the most appropriate automated packaging machine, or the best labelling system.

In fact, we can help optimise your entire logistical operation – product loading, transportation, and disposal.

This international trade show offers the perfect opportunity to display a number of newly developed packaging concepts to the tool cutting market.

Additionally, rose plastic will introduce the company's newly expanded worldwide presence including the recent construction and opening of the manufacturing facilities in Kunshan, China and the new sales office in Seoul, Korea.

Expansion of factory at rose plastic USA!

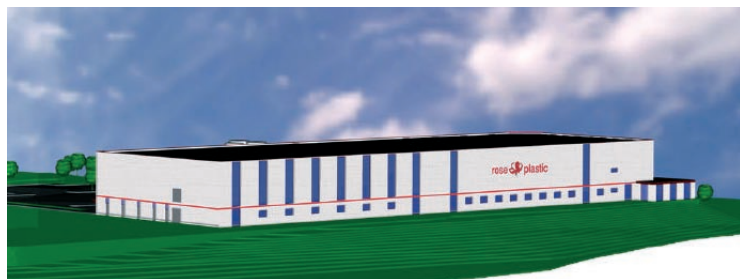

More "rose plastic" for the customers

In 1997 when rose plastic made the decision to be geographically closer to many of its' tool cutting customers, we moved our manufacturing operation from The Upper Peninsula of Michigan to California, Pennsylvania. The selection of a 5-acre site (22,000 square meters) suited the immediate need and offered the opportunity for expansion.

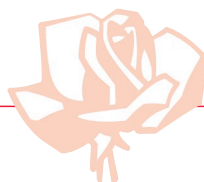

The decision proved to be correct. Thanks to a growing business and satisfied customers, rose plastic USA, currently consisting of 40,000 square feet (4,000 square meters) of manufacturing and warehouse space, is near capacity.

Expansion plans have now been completed. We have acquired an additional 3 acres (13,200 square meters) and construction work to increase manufacturing and warehousing space by 25,000 square feet (2,500 square meters) will begin this summer. This additional space will also allow us to increase and relocate several departments, enhancing the capacity and flow of materials throughout the plant.

The new building will also provide rose associates with a fitness center and enlarged lunchroom facilities. Above all, we plan to continue providing our customers with fast, flexible and reliable service and the highest quality protective plastic packaging!

New Products

ScrewPack

① ScrewPack

We have extended our ScrewPack range with 3 additional sizes.

Length (mm)	min.	max.
GP 125	80	1000
GP 160	160	1000
GP 85*	Fixed length 90	

* Ideal for electrical box sinkers and core drills

HexPack

② HexPack

Hexagonal protective packaging tube with ratchet style length adjustment. Ideal for milling cutters, shank-tools, drills, tool holders, toolbits

Int. dim. (mm)	min.	max.
∅	13	65
Length	50	620

BitPack Line

The rose plastic BitPack line is a completely new concept of bit packaging. Every pack ensures effective loading and easy handling. They come with or without hanging loop, and include an integral anti-pilferage feature.

③ BitPack Six

A 3-piece bit-pack, with inserts to hold 6, 9 or 11 bits plus adapter.

④ BitPack Cross

A bit-pack to hold 9 bits plus adapter – doubles as a screwdriver.

⑤ BitPack Magnum

Another 3-piece bit-pack. Holds 30 bits plus adapter.

Protective Caps and Protective Sleeves

Ideal for additional protection for delicate tool cutting edges. Our Extensive range of caps and sleeves (up to 30 mm diameter) allows easy fitting and removal.

In planning stage

Case for milling cutters!

First version - for milling cutter ∅ 250mm:
320 x 370 x 12 mm (external box sizes)
Available early 2005
